ABOUT ME

Self-taught frontend developer with passion for development and design. Started learning the basics a couple of years ago by following Udemy courses about HTML, CSS and JavaScript. With the time passing, I started creating simple landing pages, websites using a lot of styling and focusing on page layout.

Continued studying and improving my JavaScript skills and discovered ReactJS, the JavaScript framework which I embraced. Been working with state management, collecting and passing data over, eventually got familiar with React Redux and its basic concepts.

Eventually, I completed a MERN stack course and developed an e-commerce application with numerous functionalities/ options and features.

About myself, I am a very curious person and learning new things is one of my hobbies. I find it easy to work individually or as part of a team. Can adapt quickly to changes, situations or work flows. My current goal is to work as a web developer as I feel that over the last couple of years I gained a considerable package of knowledge and I feel ready to help build/develop/maintain applications/websites and why not, bring new things or ideas to the table.

Finished numerous Udemy courses like = {

...courses,

- The Web Developer Bootcamp : Colt Steele,

- React front to back : Brad Traversy,

- React - The Complete Guide (incl Hooks, React Router, Redux) :

Maximilian Schwarzmüller,

- MERN eCommerce from scratch : Brad Traversy}

Followed the ITSchool Frontend Development course and obtained a Minister of Education recognized diploma.

Currently looking to start a career in Web Development and be able to prove and use my skills to develop frontend applications and designs.
